

# SMALL WONDER OPL-200 & 300 SERIES DRY LINT FILTERS

The OPL Small Wonder Series 200 & 300 lint filters are especially designed for **hotel-motels and nursing homes** with dryers in the 50 to 170 pound range, \*(see note). Multiple dryers may be vented separately or into a common duct to the filter. The compact size of the Small Wonder makes them ideal for tight spaces where space is a premium. The filtration screen is a fine mesh material that catches 98% of the lint that passes through. (Typically, lint screen in the dryers catches approximately 50-80% of the lint). The Clean Cycle Small Wonder screens are like a large bag, when a dryer is on, the screen floats in the up position catching the lint, when the dryers are turned off the large lint screen drops (by gravity from weight of lint) and the lint drops down into a large holding bag, when necessary the remaining lint can be removed with the brush of a hand in seconds.

Lint is caught in a large reinforced vinyl holding bag. For the 300 Series the bag is equipped with two-zipper access openings. The upper zipper opening is for inspecting the screen. The lower zipper access is for removing lint to a trash container. The filter screen is attached with a bungee cord and can be easily replaced in minutes. **The filter has no moving mechanical parts, and requires no electricity or compressed air.**

*The Small Wonder will solve your lint problems, improve your environment and make your work place more pleasant for everyone.*

Should you need further information, assistance, or a local distributor in your area, please call our customer service number at 800-826-1245.

**\*Note:** When selecting a lint filter, it is good practice to select a filter that is oversized by at least 20%.

**Example:** For a dryer installation having a combined total of 8500 CFM, a filter with 10,000 CFM capacity should be used.
