Toll Free: 800.826.1245

SCRUB CHANGE

The Prescription for Scrubwear Management

- 78 or 118 scrub dispenser openings
- Door fully opens for EZ loading of scrubs into the unit

- Dispenser Slots = 3" x 6" x 16"

- Receiver has large dirty scrub hopper
- Photo sensor verifies receipts

TWO INDIVIDUAL UNITS

A Dispenser Unit and Receiver Unit

- *Simultaneously* collects soiled return scrubs and dispenses clean scrubs to your medical staff
- Modules can be set next to each other or at separate locations
- Each unit is operated by individual controls
- Units operate on low voltage DC power
- No motors or clutches-*to fail*

The Prescription that Works!

SCRUB CHANGE ensures authorized staff members that scrub ware will ALWAYS be available to meet their specific work schedules and needed size. It will reduce scrub wear costs now and into the future. For example: Years of experience has shown that the manual daily issues are reduced by as much as 30% to 40%, once the automated system is implemented. Plus most hospitals do a primary load of the Dispenser along with a top-up load each day, which effectively increases the daily availability of the Dispenser by an additional 40% to 60%.

Simple –Fast–Easy

User gains access to machine, by either of the following methods:

- 1) Swiping a bar-coded badge or
 - 2) Entering a secured personal code onto the keypad
- One Door will open revealing a slot inventoried with user's correct size •

Ongoing Dependability

A major design focus of the **SCRUB CHANGE** was to minimize the potential occurrence of downtime.

To assure this:

- All motors or clutches have been eliminated
- Each scrub slot is individually controlled, so if a component fails, only one slot is down – and the rest are accessible!

Function

- Management System is “real-time” & current stock level is continually updated on P.C. Screen located in Linen Room.
- Utilizes window-based software
- Variety of Reports can be printed on demand or customized
- Dual reactive sensors ensure the proper return and recording of soiled scrubs, increasing the effectiveness of the system
- Operates on low voltage DC power
- Backup power source is built-in and in the event of a power failure, units will still operate

USER FRIENDLY

Only **SCRUB CHANGE** provides “hands free” dispensing of scrub wear. Each slot door opens automatically, after authorization is received.

FAST

Dispensing time: 3-5 seconds, with ‘no’ re-set delay. Locker slots are 3” x 6” x 16” accommodates even the largest size of scrubs, without additional folding!

MINIMIZES CONGESTION

Clean scrubs can be dispensed to one staff member while another deposits soiled into hopper. Emergency access to scrubs, permitted - if the situation warrants.

SCRUB CHANGE

The Prescription that Works!

Exclusive Features and Benefits

- Only **SCRUB CHANGE** allows the full loading door to be open and in the process of daily re-loading and “At the Same Time” an authorized staff member can enter code and gain access to needed wear. This transaction will be recorded! Pleasing feature for your linen and medical staff!
- The only system that provides hands free dispensing of scrub wear since each slot door opens automatically after a person is authorized
- Fastest dispensing time frame (3-5 seconds) coupled with no recess delays
- No door or pulley cables to break and foul system operation
- Individual controls are located on each slot door, any mechanical component failure will only affect a single slot rather than a whole row of slots, half of your system, or all of your system
- The only system which operates on low voltage DC power
- The only system with its own built-in battery power back-up which ensures the system functions even during any power interruption. No need to connect to an Emergency power source.
- Attractive, modern design will complement any decor

Height & Depth Same for all Units
Doors Hinged on Left to Open
